FEEL LIKE A PILOT

The concept breaks with traditional supercar layouts, fusing the uncompromising driving experience of a Formula 1 race car with the comfort and grandeur of a luxurious GT sedan. The fundamental innovation lies in the radical spatial reconfiguration (central cockpit) and the mechanical symbiosis between the entry system and interior components

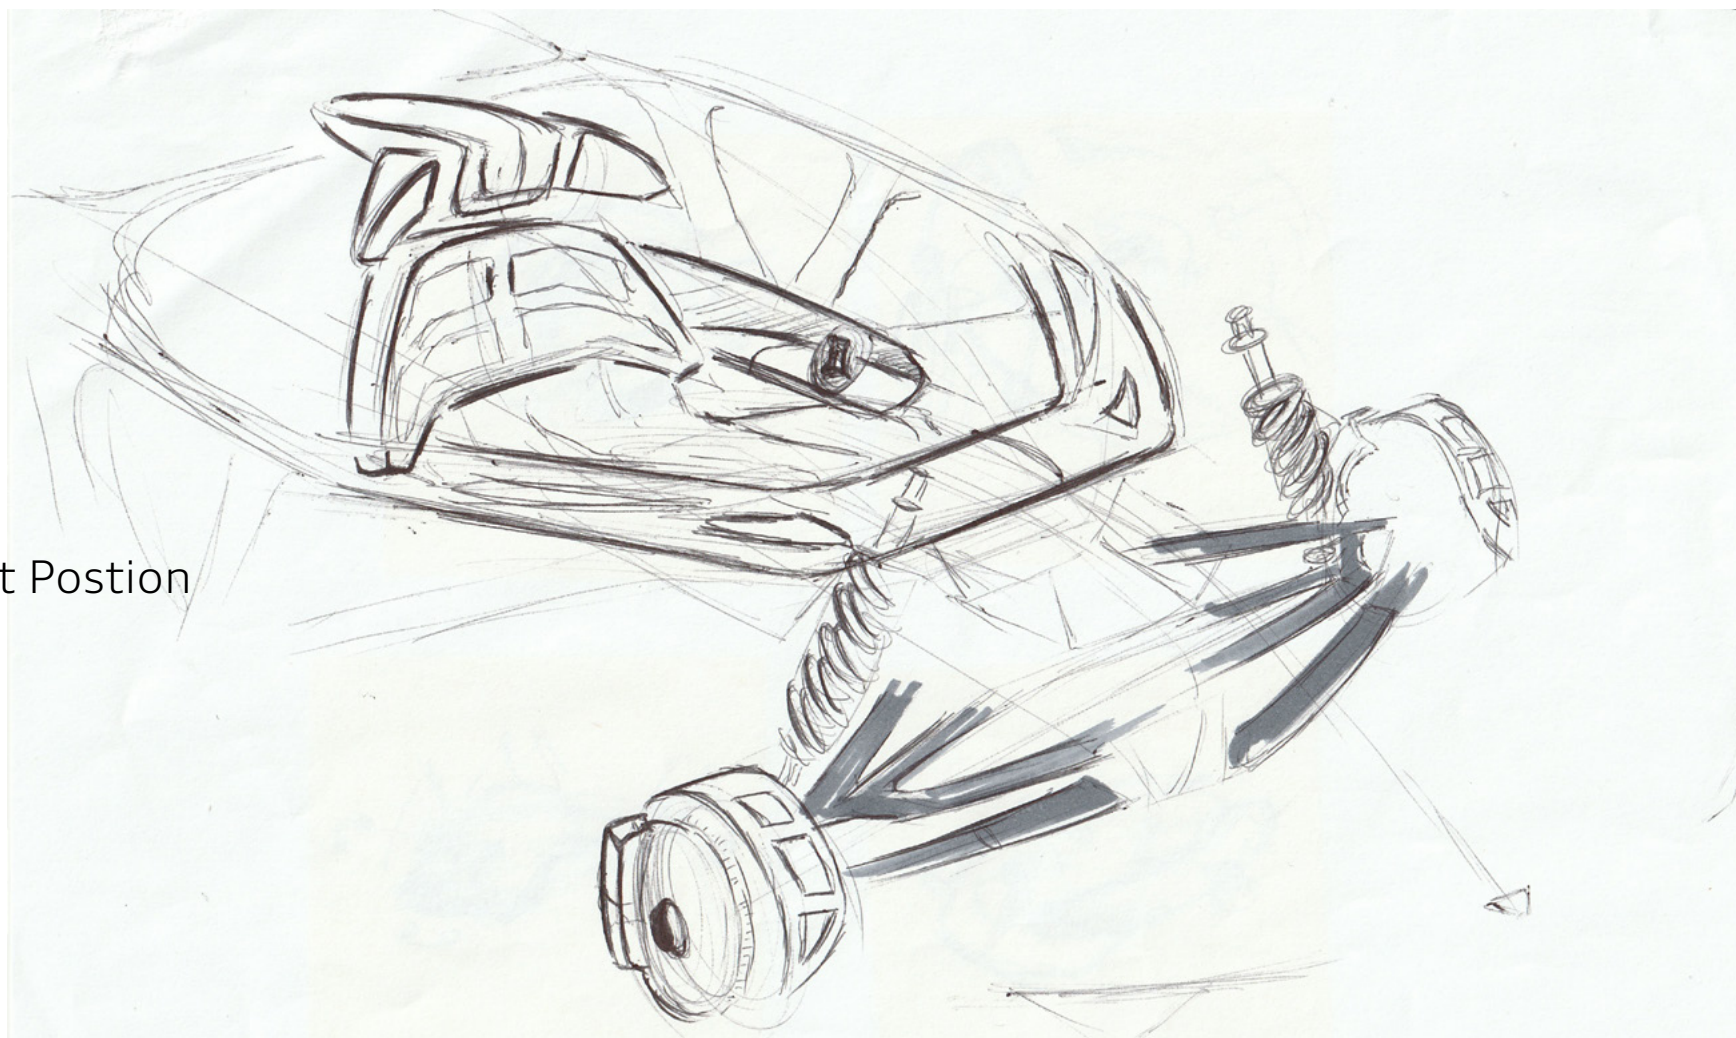

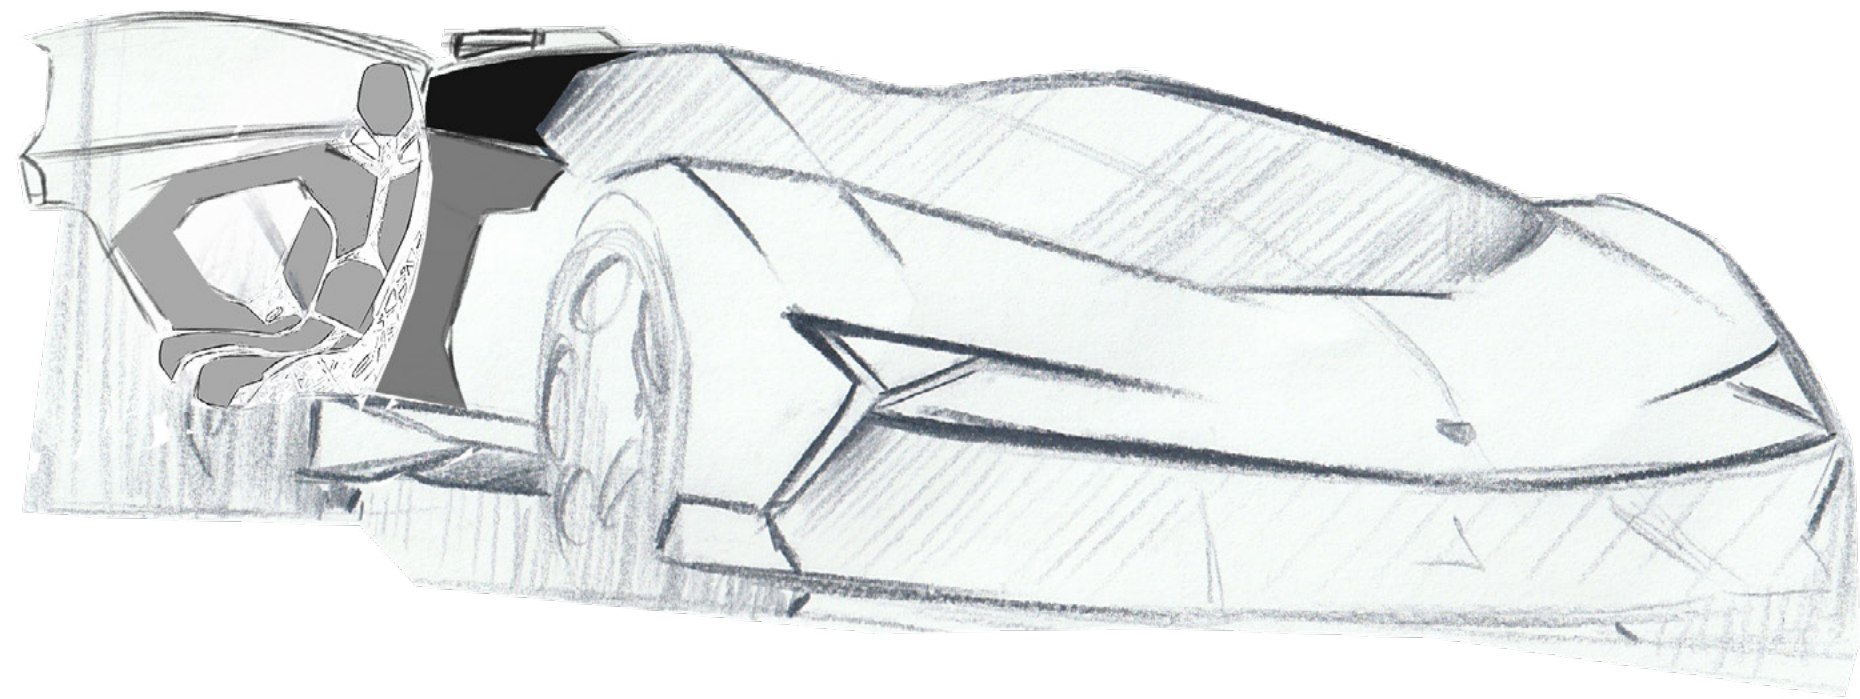

The goal was to create the ultimate „pilot feeling“ without the impractical barriers associated with conventional monocoques. The project seamlessly blends extreme sportiness with progressive luxury

The MANIFESTO: For Individuals who wish to use the vehicle both for the racetrack—with the focus on the driver—and for prestigious urban events, where they can ride as passengers in the luxurious rear cabin.
