Today's vehicle interiors are mostly limited to the mere act of transportation. The goal of this project is to develop a modular concept that breaks down structural rigidity and overcomes the limited range of functions. Instead of an integrated design, the fixed platform and interchangeable functional units are strictly separated from one another. Through an intuitive grid interface, the isolated modules communicate with one another, enabling a complete reconfiguration of the space in under three minutes. Intelligent and multi-purpose modules seamlessly transform the vehicle into a dining area, a workspace, a sleeping area, or maximize cargo capacity. This scalable architecture dynamically adapts to diverse everyday needs and uncompromisingly translates the desire for spontaneity into built freedom.
